Example Image Comparison:

Instructions: Pretend you are in the following scenario - you are asking an AI model to create an image you have in mind, this image is displayed on the left. You first prompt the model with a short non-detailed description of the image, this description is called "original prompt" and is below the goal image on the left.

Your job in this task is to compare the two model's produced images against each other given the goal image and original prompt. Do this by answering the questions in the rightmost column.

Questions Rank which produced image matches best to the

goal image in terms of

content?

Rank which image matches best to the goal image in terms of style and aesthetics?
